ALWAYS USE A CERTIFIED STAND FOR JACKED EQUIPMENT

- In many circumstances, equipment or components need to be elevated to enable work activities to be carried out.
- We cannot rely on energy sources such as hydraulics to maintain elevated equipment.
- Elevated equipment must be secured from falling by way of stands or locking jacks which are rated and able to withstand this potential load.

Always complete a **TAKE 5** prior to commencing any new job or task.

UNDERCARRIAGE MANAGEMENT FOR PEAK PERFORMANCE

Maximise Uptime, Minimise Wear

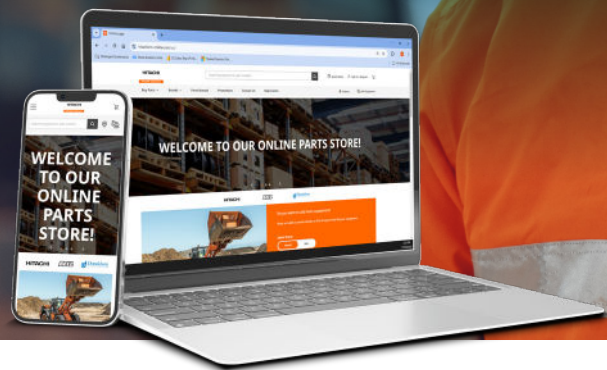

- Inspect undercarriage components regularly to identify signs of wear or damage early.
- Maintain proper track tension to ensure optimal performance and prevent undue stress on components.
- Clean the undercarriage frequently to remove dirt, debris, and material build-up, which can cause excessive wear.
- Monitor tumble wear condition to prevent premature failure.
- Monitor and adjust sprockets and idlers to maintain proper alignment and extend undercarriage life.
- Replace worn parts promptly to avoid more costly repairs and maintain efficiency.

At Hitachi we offer comprehensive undercarriage services to keep your equipment running smoothly.

GET A FREE UNDERCARRIAGE INSPECTION WHEN PERFORMED BY A HITACHI CSR. CONTACT US TODAY!
